SYLVESTER BEMPONG

+233-540-456-262 | Sylvesterobese6665@gmail.com | sbempong.github.io | linkedin.com/in/sylvester-bempong

CORE SKILLS

- TypeScript
- AI-assisted development (Cursor)
- Version control (Git, SVN)
- Google Cloud Platform
- AI/ML model integration
- Python
- Sentry monitoring and telemetry
- Docker
- TensorFlow and PyTorch
- Data analysis and visualization

WORK EXPERIENCE

Software Engineer, *Akomapa Health Foundation* 06/2026 to Current

- Design, build, and maintain Akomapa Academy and Nkwapa using TypeScript, supporting medical education and offline patient management.
- Improve the foundation's website by refining its design and making the user interface clearer and easier to use.
- Use Cursor to support day-to-day development and Sentry to monitor errors, investigate issues, and keep the platforms reliable.

Sol Kanea

> **CTO & Co-Founder** 02/2026 to Current
>
> - Define the technical direction, product roadmap, and engineering priorities for the company's renewable-energy products.
> - Lead architecture decisions and establish practical engineering standards across technical projects.
> - Recruit and mentor team members and support stakeholder discussions that secured $5,000 from the Tony Elumelu Foundation.
>
> **Data Systems Lead** 11/2024 to 02/2026
>
> - Created AutoCAD schematics for a portable solar kit designed for people in rural communities.
> - Used Docker and Grafana to simplify technical workflows and monitor solar-system performance.
> - Improved data workflows to help the team track system performance and make better project decisions.

Research Fellow, *NORMA TECH* 05/2026 to 10/2026

- Investigated how AI, data, and other technologies can support agriculture and smallholder farming systems.
- Analyzed the barriers and opportunities shaping youth participation in Kenya's transition to a fair and sustainable food system.
- Collaborated with an international fellowship team to gather evidence and turn research findings into practical recommendations.

AI/ML Engineer Intern, *PlantVillage* 06/2025 to 02/2026

- Analyzed food-image datasets to identify useful patterns and support model development.
- Tested GroundingDINO and MobileSAM to understand how accurately they could detect and segment food items.
- Integrated pretrained computer-vision models into web applications using TensorFlow and PyTorch.

Development Team Lead, *NeuralCash, Academic City University* 03/2025 to 06/2025

- Led the development of NeuralCash, an AI-powered product that analyzes mobile-money transactions and encourages better financial habits.
- Coordinated project timelines and assigned work across the development team.
- Reviewed code and evaluated new technologies to maintain quality and improve the product.

Data Analyst Intern, *Holocron Labs* 10/2024 to 12/2024

- Supported a maternal-health data research project focused on the San Francisco Bay Area.
- Used Looker Studio to analyze the data and create clear visual reports.
- Prepared reports that helped team members understand and discuss the research findings.

EDUCATION

B.Sc. Agricultural and Mechanical Engineering, *University of Cape Coast* Expected Graduation: 2029
